Cluster: Rewrite rational expressions. (Algebra 2 - Supporting Cluster) - Clusters should not be sorted from Major to Supporting and then taught in that order. To do so would strip the coherence of the mathematical ideas and miss the opportunity to enhance the major work of the grade with the supporting clusters.

An algebraic fraction is the indicated quotient of two algebraic expressions. As with fractions of integers, the denominator of an algebraic fraction cannot be zero. Two examples of algebraic fractions are $\frac{1}{x}$ and $\frac{1}{x^2}$. Algebraic fractions are subject to the same field properties as arithmetic fractions. If the numerator and the denominator are polynomials, as in $\frac{1}{x^2}$, the algebraic ...

A regular expression, regex or regexp (sometimes called a rational expression) is, in theoretical computer science and formal language theory, a sequence of characters that define a search pattern. Usually this pattern is then used by string searching algorithms for "find" or "find and replace" operations on strings, or for input validation.. The concept arose in the 1950s when the American ...
