PostScript fonts are font files encoded in outline font specifications developed by Adobe Systems for professional digital typesetting. This system uses PostScript file format to encode font information. "PostScript fonts" may also separately be used to refer to a basic set of fonts included as standards in the PostScript system, such as Times, Helvetica and Avant Garde

WebAssign

It is not necessary to put the implementation in the header file, see the alternative solution at the end of this answer.. Anyway, the reason your code is failing is that, when instantiating a template, the compiler creates a new class with the given template argument.

Why can templates only be implemented in the header file?

This article includes a list of references, related reading or external links, but its sources remain unclear because it lacks inline citations. Please help to improve this article by introducing more precise citations. (December 2006) (Learn how and when to remove this template message) (Learn how and when to remove this template message)
