In the design of experiments, two or more "treatments" are applied to estimate the difference between the mean responses for the treatments. For example, an experiment on baking bread could estimate the difference in the responses associated with quantitative variables, such as the ratio of water to flour, and with qualitative variables, such as strains of yeast.

Experiment - Wikipedia

i Acknowledgement The CRO Council would like to thank Towers Watson for their support, guidance, and coordination throughout the development of this work product.
