

cyprinid fishes systematics biology pdf

The Cyprinidae are the family of freshwater fishes, collectively called cyprinids, that includes the carps, the true minnows, and their relatives (for example, the barbs and barbels). Also commonly called the "carp family", or "minnow family", Cyprinidae is the largest known fish family and the largest vertebrate animal family in general, with about 3,000 living and extinct species in about 370 ...

Cyprinidae - Wikipedia

Purpose. This work is meant to provide a guide to the freshwater fishes of Iran. There are no modern keys to this fauna, some available books are incomplete or cursory treatments or outdated, and the detailed and diverse scientific literature is widely scattered in time, languages and journals.

Freshwater Fishes of Iran - Introduction - Brian Coad

The mummichog (*Fundulus heteroclitus*) is a small killifish found along the Atlantic coast of the United States and Canada. Also known as Atlantic killifish, mummies, gudgeons, and mud minnows, these fish inhabit brackish and coastal waters including estuaries and salt marshes. The species is noted for its hardiness and ability to tolerate highly variable salinity, temperature fluctuations from 6 ...

Mummichog - Wikipedia

There are two main reasons why carp have become a dominant pest in Australia. The first relates to their biology: carp can tolerate a wide variety of environmental conditions, have a broad diet, grow rapidly, mature early, can produce large numbers of eggs, are strong swimmers, good jumpers, and do well in ecosystems that are modified by humans.

FAQ - Carp

Los ciprínidos o carpas (*Cyprinidae*) son una familia de peces teleosteos fisóstomos, casi todos de agua dulce aunque algunas especies pueden encontrarse en estuarios, distribuidos por ríos de África, Eurasia y Norteamérica (desde el norte de Canadá; hasta el sur de México). [1] Su nombre procede del griego kyprinos, que significa "pez dorado". [2]

Cyprinidae - Wikipedia, la enciclopedia libre

Karpfiskarna är en familj fiskar i ordningen karpartige fiskar. Det är den artrikaste familjen av sötvattensfiskar, med fler än 2 000 arter uppdelade på mer än 200 släkter. De saknar tänder i munnen, men har istället kraftiga svalgben med stora tänder, som är specialiserade för olika typer av föda.
