A parabolic partial differential equation is a type of partial differential equation (PDE). Parabolic PDEs are used to describe a wide variety of time-dependent phenomena, including heat conduction, particle diffusion, ocean acoustic propagation (in a certain approximation), and pricing of derivative investment instruments.. To define the simplest kind of parabolic PDE, consider a real-valued ...

In mathematics, a partial differential equation (PDE) is a differential equation that contains unknown multivariable functions and their partial derivatives. PDEs are used to formulate problems involving functions of several variables, and are either solved by hand, or used to create a computer model. A special case is ordinary differential equations (ODEs), which deal with functions of a single ...

Model Problem IV.3. For comparison, let us find another Fourier series, namely the one for the periodic extension of $g(x) = x$, $0 \leq x < 1$, sometimes designated $x \bmod 1$. Watch it converge. Solution. (For more details on the calculations, see the Mathematica notebook or the Maple worksheet. For x between 1 and 2, the function is $(x-1)L$, for x between 2 and 3 it is $(x-2)$, etc.

This paper studies the notion of W -measurable sensitivity in the context of semigroup actions. W -measurable sensitivity is a measurable generalization of sensitive dependence on initial conditions.

In analisi matematica, un'equazione differenziale alle derivate parziali, anche detta equazione alle derivate parziali (termine abbreviato in EDP o spesso in PDE, dall'acronimo inglese Partial Differential Equation), $\tilde{\Delta}$ un'equazione differenziale che coinvolge le derivate parziali di una funzione incognita di n variabili indipendenti.. In una PDE si descrive la funzione indirettamente ...

En matemáticas una ecuación en derivadas parciales (a veces abreviado como EDP) es aquella ecuación diferencial cuyas incógnitas son funciones de diversas variables independientes, con la peculiaridad de que en dicha ecuación figuran no solo las propias funciones sino también sus derivadas. Tienen que existir funciones de por lo menos dos variables independientes. [1]

Corrélation génotype et phénotype

Il existe un certain rapport entre la mutation (le génotype) et les manifestations cliniques de la maladie (le phénotype). La très grande variabilité des manifestations et de la gravité de cette maladie est en rapport avec les multiples mutations du gène CFTR.
