Rats in New York City are widespread, as they are in many densely populated areas. For a long time, the number of rats in New York City was unknown, and a common urban legend declared there were up to five times as many rats as people. In 2014, however, scientists more accurately measured the entire city's rat population to be approximately only 24% of the number of humans.

Most Americans recognize climate change, but some are still unsure about its causes. Tens of thousands of scientists in more than a hundred nations have amassed an overwhelming amount of evidence pointing to a clear conclusion: Humans are the main cause. We're the ones who burn fossil fuels and clear trees that absorb carbon dioxide, sending heat-trapping gases into the atmosphere.

The IARC Monographs identify environmental factors that can increase the risk of human cancer. These include chemicals, complex mixtures, occupational exposures, physical agents, biological agents, and lifestyle factors. National health agencies can use this information as scientific support for their actions to prevent exposure to potential carcinogens.
