In computer science, functional programming is a programming paradigm—a style of building the structure and elements of computer programs—that treats computation as the evaluation of mathematical functions and avoids changing-state and mutable data. It is a declarative programming paradigm, which means programming is done with expressions or declarations instead of statements.

Using Automated Logic Models to Enhance Grants Management. by. Barry Nazar. Frederick Richmond, Manuel Valentin. and. Barbara Dorf. Logic models have been advanced previously in this journal for their ability to enhance strategic management of grants programs and for their ability to improve the development of proposals.

Metric spaces for program improvement (pdf, bibtex) . Jennifer Hackett and Graham Hutton. In preparation, 2018. Improvement theory is an approach to reasoning about program efficiency that allows inequational proofs of improvement to be written in a similar manner to equational proofs of correctness.

Grant Programs and Services SAMHSA's formula and discretionary grant programs support many types of behavioral health treatments and recovery-oriented services. SAMHSA's services increase access to disability income benefits for eligible adults who are experiencing or at risk for homelessness. Learn more about grant programs and services:

Design, Evolution and Use of KernelF (Version 1.0, June 2018) KernelF is a functional language built on top of MPS. It is designed to be highly extensible and embeddable in order to support its use at the core of domain-specific languages, realising an approach we sometimes call Funclerative Programming.

The present code is an implementation of MonadPlus and the MonadPlus transformer with fair conjunctions and disjunctions and with distinct good termination properties. This implementation terminates whereas more conventional MonadPlus realizations (e.g., the List monad) diverge. Here's an example ...

What is ATS? ATS is a statically typed programming language that unifies implementation with formal specification. It is equipped with a highly expressive type system rooted in the framework Applied Type System, which gives the language its name. In particular, both dependent types and linear types are available in ATS.

Functional programming has very long history and a lot of books was released in paper & electronic forms. These books covers all areas, from theoretical foundations of functional programming to programming in concrete languages & frameworks.

Concurrent computing is a form of computing in which several computations are executed during overlapping time periodsâ€”concurrentlyâ€”instead of sequentially (one completing before the next starts). This is a property of a systemâ€”this may be an individual program, a computer, or a networkâ€”and there is a separate execution point or "thread of control" for each computation ("process").

Functional languages use a different paradigm than imperative and object-oriented languages. They use side-effect-free functions as a basic building block in the language.
