Influenza vaccines, also known as flu shots or flu jabs, are vaccines that protect against infection by influenza viruses. A new version of the vaccine is developed twice a year, as the influenza virus rapidly changes. While their effectiveness varies from year to year, most provide modest to high protection against influenza.

1. Introduction. Despite significant attention given to animal diseases in the last half-century, our understanding of disease processes, and how to manage them at the livestock-wildlife interface, remains limited (Rhyan and Spraker, 2010). The increasing role of wildlife in the emergence of livestock and human diseases is due to multiple changes occurring within wildlife, livestock, and ...
