Noise and Transient Chaos In this chapter, we treat transiently chaotic dynamical systems under the influence of noise, focusing on a number of physical phenomena. Firstly, we will demonstrate that noise can increase the lifetime of transient chaos and induce dynamical interactions among different invariant sets of the system.

or control. Chaos theory and the sciences of complexity (Kellert, 1993; Wheatley, 1999) were developed to help understand highly complex systems. They recognize that beneath the apparently chaotic behavior of a complex system lie certain patterns that can help one to both understand and influence the behavior of the system.

of differential equations and view the results graphically are widely available. As a consequence, the analysis of nonlinear systems of differential equations is much more accessible than it once was. The discovery of such complicated dynamical systems as the horseshoe map, homoclinic tangles, and the
