In economics an isocost line shows all combinations of inputs which cost the same total amount. Although similar to the budget constraint in consumer theory, the use of the isocost line pertains to cost-minimization in production, as opposed to utility-maximization. For the two production inputs labour and capital, with fixed unit costs of the inputs, the equation of the isocost line is

Isocost - Wikipedia

An isoquant (derived from quantity and the Greek word iso, meaning equal) is a contour line drawn through the set of points at which the same quantity of output is produced while changing the quantities of two or more inputs. While an indifference curve mapping helps to solve the utility-maximizing problem of consumers, the isoquant mapping deals with the cost-minimization problem of producers.

Richard L. Daft, Ph.D., is the Brownlee O. Currey, Jr. Professor of Management and Principal Senior Lecturer in the Owen Graduate School of Management at Vanderbilt University, where he specializes in the study of leadership and organization theory.

Organization Theory and Design: Richard L. Daft

En microeconomía neoclásica, una isocuanta (del griego ἴσος 'igual' y del latín quanta 'tan grande como') representa diferentes combinaciones de factores que proporcionan una misma cantidad de producto. Para alcanzar un determinado nivel de producto se puede realizar como resultado de diferentes combinaciones de los factores productivos, dependiendo del método que se utilice.
